PROFESSIONAL SUMMARY

Computer Science student majoring in Data Science with hands-on experience as a Full-Stack AI Developer. Built few production-ready systems including IoT security monitoring, deepfake detection, algorithmic trading platforms, and multi-tenant CRM with ML capabilities. Proficient in Python, Django, React, TensorFlow, PyTorch, and AWS, Expert on AI-assisted development for rapid delivery. Passionate about project-based, hands-on work and committed to developing scalable AI systems that solve real-world challenges. Seeking AI engineering and data science internship opportunities.

EDUCATION

Albukhary International University

Alor Setar, Kedah

Bachelor of Computer Science (Honours)

Expected Graduation Date: December 2026

- Relevant coursework: Artificial Intelligence, Database Management System, Software Engineering, Machine Learning, Statistical Programming, Parallel and Distributed Databases, Cloud Computing, IoT, Data Mining and Analytics, Deep Learning, Information Visualization, Natural Language Processing.
- Current CGPA: 3.40

SKILLS

Programming & Frameworks: Python, SQL, JavaScript, Java, R | Django, Flask, React, TensorFlow, PyTorch, Keras, OpenCV, scikit-learn

Databases & Cloud: PostgreSQL, MySQL, Redis, Elasticsearch | AWS, Azure, Docker, Git/GitHub

Tools: VS Code, Jupyter Notebook, GitHub Copilot, Power BI, Matplotlib, Seaborn, Ai assistance coding

Soft Skills: Problem-solving, Communication, Teamwork, Critical Thinking, Time Management

PROJECT EXPERIENCE

Full-Stack AI Web Application | IoT Security Monitoring & Threat Detection for ALTEL

- Built enterprise IoT security platform with ML-based threat prediction, anomaly detection, and automated vulnerability scanning using Nmap and OpenVAS.
- Implemented real-time monitoring dashboard, multi-channel alerting, and automated incident response with device quarantine capabilities.
- Technologies: Python, Django, React, TypeScript, Machine Learning, Redis, Celery, Docker, PostgreSQL

Full-Stack Web Application | Deepfake Detection System

- Built deepfake detection system using CNN and ResNet50 achieving 94% accuracy with real-time video analysis.
- Developed Django web app with authentication, video upload, and detection dashboard with frame extraction pipeline.
- Technologies: Python, Django, TensorFlow, Keras, OpenCV, ResNet50, SQLite, HTML/CSS/JavaScript

Web Application | Playground Booking & Management System | Start-up project

- Built full-stack booking platform with real-time availability, dynamic slot scheduling, payment processing, owner dashboards with analytics, and location-based search with automated notifications

- Stack: Django, React, TypeScript, PostgreSQL, Tailwind CSS, Redis, RESTful APIs

Full-Stack Deep Learning Web Application | AI Algorithmic Trading Platform

- Developed trading platform with RL agents (PPO, DQN, A3C) and LSTM/Transformer models achieving 95%+ backtesting accuracy.
- Built real-time market data pipeline with risk management, portfolio optimization, and paper trading capabilities.
- Technologies: Python, Django, TensorFlow, PyTorch, Ray RLLib, PostgreSQL, Alpha Vantage API

Full-Stack AI Web Application | Video Streaming Platform

- Architected Netflix-style platform with adaptive streaming (360p-4K), CDN integration, and AI recommendation engine.
- Implemented video transcoding with FFmpeg, real-time search via Elasticsearch, and WebSocket live streaming.
- Technologies: Python, Django, React, TensorFlow, FFmpeg, PostgreSQL, Redis, Elasticsearch, AWS S3

Machine Learning Web Application | Enterprise CRM & Project Management SaaS

- Developed multi-tenant CRM with AI lead scoring (87% accuracy), sales forecasting, and agile project management features.
- Implemented churn prediction (84% accuracy), sentiment analysis, and automated task assignment using ML models.
- Technologies: Python, Django, PostgreSQL, TensorFlow, XGBoost, Celery, Redis, Docker

CERTIFICATION

- Fundamentals of Computer Science & Data Science – Phitron Academy | Issued: August 5, 2024
- Google Cloud Computing Foundations – Google Cloud Skill Boost | Issued: October 1, 2025

RESEARCH EXPERIENCE

- Research Assistant – Load Trust AI | Developed AI models for improving system trustworthiness | Manuscript in preparation
- Researcher – Violation Detection Using NLP and Deep Learning | Real-time violation detection system | Ongoing
- Researcher – MediAI: AI Agent for Medical Diagnosis | Automated diagnosis and treatment planning system Ongoing

EXPERIENCE

Junior Data Scientist Intern

Phitron Academy | Jan 2024 – Apr 2024 | Remote

- Applied predictive modeling and machine learning for data analysis and forecasting.
- Built data pipelines, integrated ML models into web applications, and deployed them using Django and AWS.
- Technologies: Python, SQL, Pandas, NumPy, scikit-learn, TensorFlow, Django, AWS
